

ADVANTAGES

- Protection for operators & facility
- Equipment in compliance to ATEX & NFPA
- Contained system for handling harmful waste dust

|                      |                                                                                                                                                                                                                                                                          |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Application          | Continuous liner systems are typically used on chemical or pharmaceutical applications.                                                                                                                                                                                  |
| Installation Options | <div>- The continuous liner system is available for the following dust collectors: Gold Series Camtain, Gold Series High Vacuum, Gold Series X-Flo, Quad Pulse Package Series.</div> <div>- The system is usually used together with the Camfil Dual Valve system.</div> |
| Comment              | We supply equipment which is compliant according to regional regulation such as ATEX or NFPA.                                                                                                                                                                            |
